ARTIFICIAL BEINGS

Create and scale AI agents through conversation.

Turn your expertise into complete agent applications you can run, improve and sell. We handle the AI stack.

In alpha. In production.

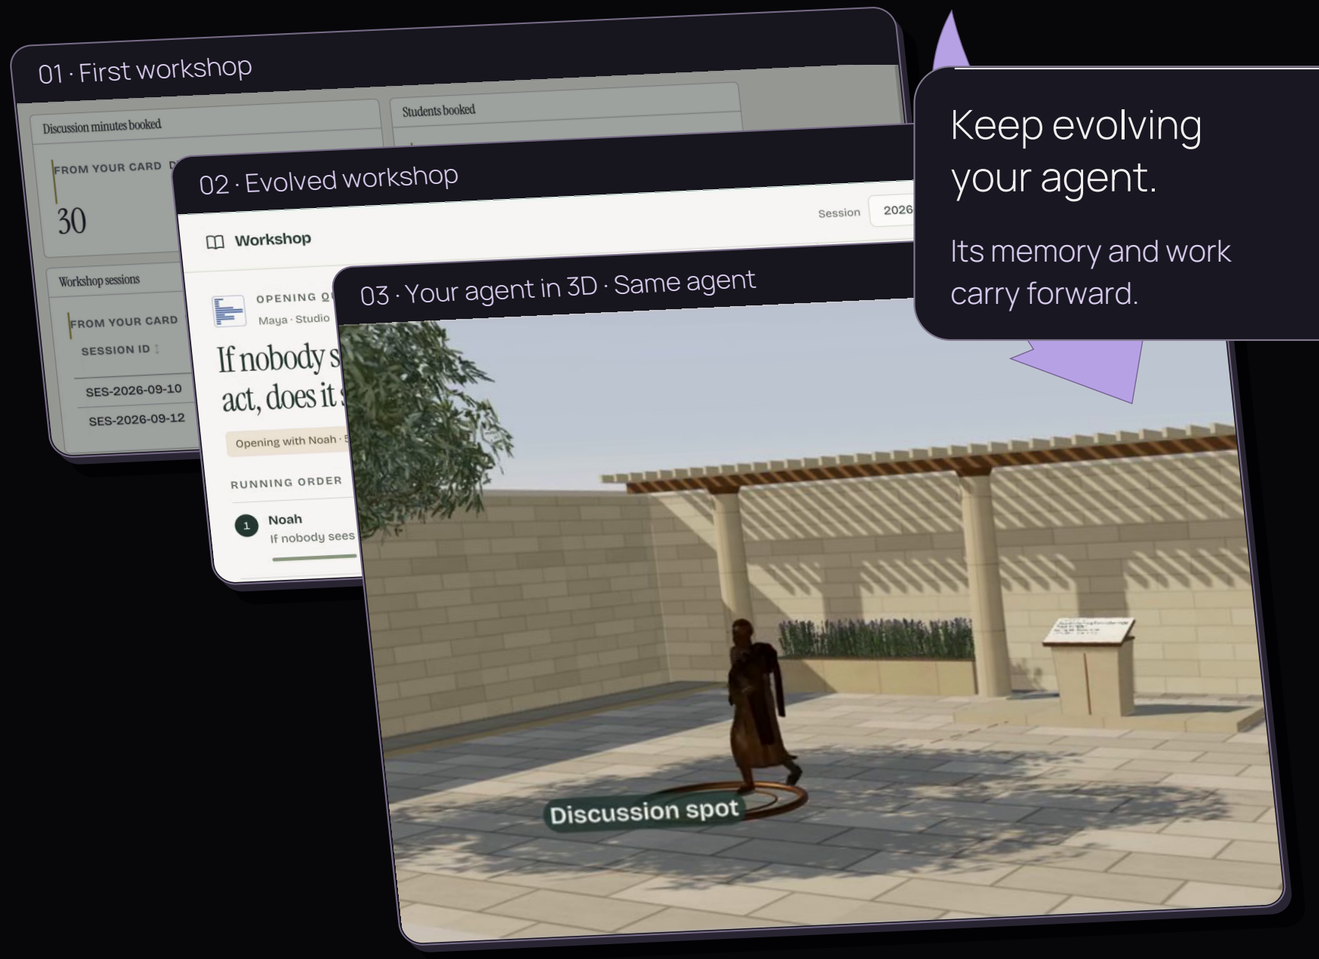

$13,500 signed over five months

One agent across records, a workshop app, Telegram and a 3D world.

Describe your agent. Keep evolving it as technology changes.

Bring your ideas and expertise.
We handle the rest. No AI knowledge needed.

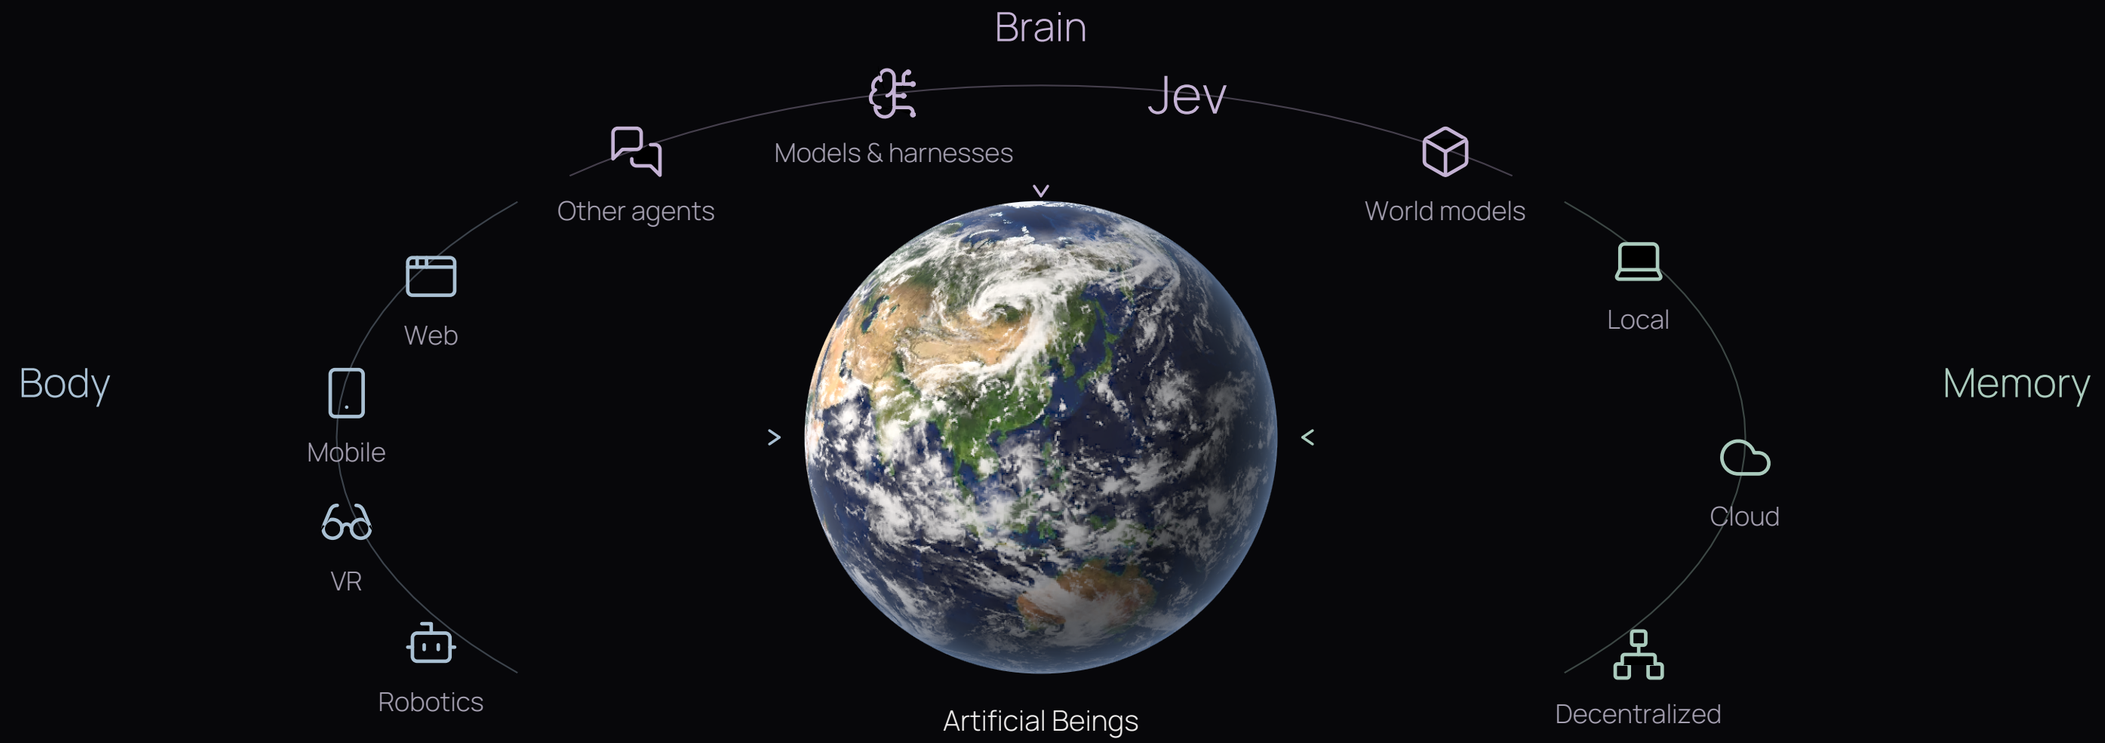

Keep evolving your agent.

Its memory and work carry forward.

Engineered for a changing world.
Protect your work when intelligence grows.

Build specialized components for your own agents—or sell them to other creators in the ecosystem.

Creators

Build agent businesses.

Build components for AB. → Power more agent businesses.

Custom code for the business.
Shared machinery for the agents.

ALTERNATIVES	THE TRAP	HOW AB AVOIDS IT
Model labs Models & developer tools	Powerful AI. Still a product to build. Model APIs supply intelligence and run tasks. Making them a usable product still means building the tools, screens, and customer access.	→ Describe your product. We build and run it. AB writes the custom code, connects tools and screens, and tests and hosts the app for your users. You direct what it does.
Agent builders Relevance AI Pickaxe	The builder's limits become your product's limits. Pages and actions cover basic customization. New or private intelligence and memory exceed the builder's standard settings.	→ Specialists build the technology. Creators build businesses. Developers build new intelligence and memory into AB. Creators reuse those blocks across products without becoming AI engineers.
Vibe coding Replit Lovable	Agent upkeep becomes another coding task. General app builders can write the code. Keeping memory, actions, and screens working together remains your job in every app.	→ We maintain the agent system. You improve the product. Your custom features run on shared software for memory, tools, and screens. We improve that system so you can build your business.

In alpha. Already doing business.

$250/month plan

Start with experts.
Go deep. Then go wide.

First

Landscaping business

Go Green

Automate the office—from first inquiry to final payment.

Email · Yelp · Notion · Housecall Pro

Next

Home-service businesses

Trusted industry experts adapt and deliver agents to businesses they already serve.

One expert can bring many businesses.

Then

Experts across fields

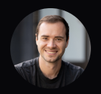

Property management · Agencies · Research · Education · Manufacturing

Specialized agent businesses. One AB foundation.

Eventually

Agent businesses for anyone.

No AI stack to learn.

About 75% of people have barely encountered LLMs.

Andrej Karpathy · estimate · Oct. 2026

AB SUBSCRIPTIONS

Make $25/month
Create your agent · private workspace

Scale $250/month per org
Serve customers and staff

Operate from $2,500/month (proposed)
Office operations across systems · includes Scale

Illustrative revenue scale: 3,334 Operate customers: about $100M annually. At proposed pricing of $2,500/month.

I built the stack so users don't have to.

Creating an agent should be as simple as describing what you want it to do.

You bring your ideas and expertise;
AB builds and runs the complete application.

CJ Lee

Founder & engineer
Artificial Beings

6 years building agent systems.
4 of them full-time.

INDEPENDENT RESEARCH

Built a learning engine.

C#/GPU learning engine, neural networks and autodiff, **from scratch and before ChatGPT**.

TEMPORA LABS

Led engineering.

Co-founder and **agent-framework author**. Led **seven engineers**.

KENYA

Built, delivered, improved.

Authored the initial finance chatbot and led client delivery. **User feedback** shaped its answers and interface. Used by community leaders across **13 counties**.

AB today: **the complete agent platform, built and shipped.**

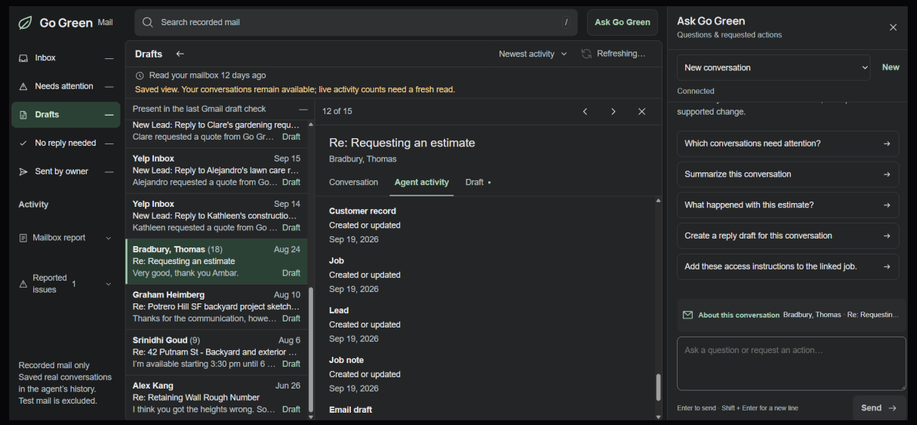

The Windows for robots and artificial beings.

Let anyone create beings that learn from their work, develop specialized capabilities and collaborate across software, virtual worlds and eventually physical machines.

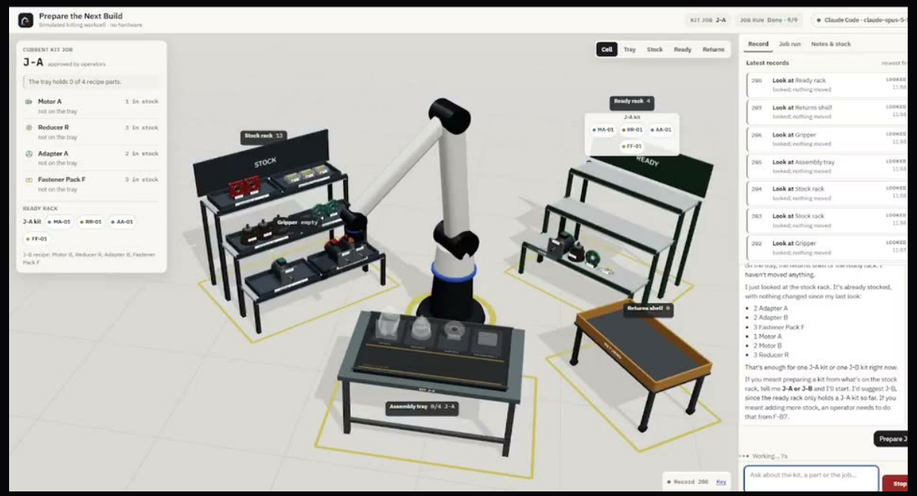

We're building the platform where progress across AI becomes progress for the agents you've already built.

Build your agent. Grow your business.

Let's talk: agent@artificialbeings.ai

Go Green: its agent will run the office—from first inquiry to final payment—so the owner can grow the business.

Robotics, in simulation. An agent prepares a parts kit in a simulated workcell and records each action. Train and run specialized models from their experience.
